

To Whom it may concern:I am an xm satellite radio subscriber and really enjoy the availability of it. I travel to areas that do not get any reception at all and with the added variety that xm provides, I am a happy customer. I respectfully believe it is not up to the National Association of Broadcasters to dictate what I am permitted to hear and urge the FCC to reject the petition 04-160. I pay for my services and should be able to receive traffic and weather updates. I do not believe NAB's interest are related to public concern, but rather monetary gain. I hope you see it for what it is.....
